

## Low-Noise, Very Low Drift, Precision Voltage Reference

Check for Samples: [REF5010](#), [REF5020](#), [REF5025](#), [REF5030](#), [REF5040](#), [REF5045](#), [REF5050](#)

### FEATURES

- **LOW TEMPERATURE DRIFT:**
  - High-Grade: 3ppm/°C (max)
  - Standard-Grade: 8ppm/°C (max)
- **HIGH ACCURACY:**
  - High-Grade: 0.05% (max)
  - Standard-Grade: 0.1% (max)
- **LOW NOISE:** 3 $\mu$ V<sub>PP</sub>/V
- **EXCELLENT LONG-TERM STABILITY:**
  - 45ppm/1000hr (typ) after 1000 hours
- **HIGH OUTPUT CURRENT:**  $\pm$ 10mA
- **TEMPERATURE RANGE:** –40°C to +125°C

### APPLICATIONS

- 16-BIT DATA ACQUISITION SYSTEMS
- ATE EQUIPMENT
- INDUSTRIAL PROCESS CONTROL
- MEDICAL INSTRUMENTATION
- OPTICAL CONTROL SYSTEMS
- PRECISION INSTRUMENTATION

### DESCRIPTION

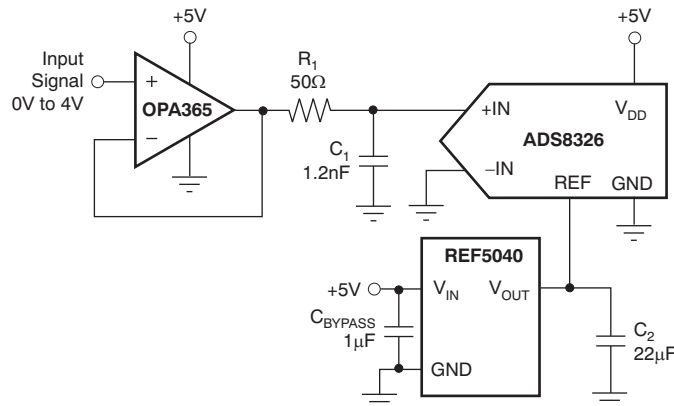

The REF50xx is a family of low-noise, low-drift, very high precision voltage references. These references are capable of both sinking and sourcing, and are very robust with regard to line and load changes.

Excellent temperature drift (3ppm/°C) and high accuracy (0.05%) are achieved using proprietary design techniques. These features, combined with very low noise, make the REF50xx family ideal for use in high-precision data acquisition systems.

Each reference voltage is available in both standard- and high-grade versions. They are offered in MSOP-8 and SO-8 packages, and are specified from –40°C to +125°C.

**REF50xx Family**

MODEL	OUTPUT VOLTAGE
REF5020	2.048V
REF5025	2.5V
REF5030	3.0V
REF5040	4.096V
REF5045	4.5V
REF5050	5.0V
REF5010	10.0V

NOTES: (1) DNC = Do not connect.  
(2) NC = No internal connection.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## ORDERING INFORMATION<sup>(1)</sup>

PRODUCT	OUTPUT VOLTAGE
<b>STANDARD GRADE (8ppm, 0.1%)</b>	
REF5020A	2.048V
REF5025A	2.5V
REF5030A	3.0V
REF5040A	4.096V
REF5045A	4.5V
REF5050A	5.0V
REF5010A	10.0V
<b>HIGH GRADE (3ppm, 0.05%)</b>	
REF5020I	2.048V
REF5025I	2.5V
REF5030I	3.0V
REF5040I	4.096V
REF5045I	4.5V
REF5050I	5.0V
REF5010I	10.0V

- (1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or see the [device product folder](#) at [www.ti.com](http://www.ti.com).

## ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>

	REF50xx	UNIT
Input Voltage	+18	V
Output Short-Circuit	30	mA
Operating Temperature Range	–55 to +125	°C
Storage Temperature Range	–65 to +150	°C
Junction Temperature (T <sub>J</sub> max)	+150	°C
ESD Rating	Human Body Model (HBM)	3000
	Charged Device Model (CDM)	1000

- (1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

## ELECTRICAL CHARACTERISTICS: PER DEVICE

**Boldface** limits apply over the specified temperature range,  $T_A = -40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

At  $T_A = +25^{\circ}\text{C}$ ,  $I_{\text{LOAD}} = 0$ ,  $C_L = 1\mu\text{F}$ , and  $V_{\text{IN}} = (V_{\text{OUT}} + 0.2\text{V})$  to 18V, unless otherwise noted.

PARAMETER	CONDITIONS	PER DEVICE			UNIT
		MIN	TYP	MAX

## APPLICATION INFORMATION

The REF50xx is family of low-noise, precision bandgap voltage references that are specifically designed for excellent initial voltage accuracy and drift. Figure 28 shows a simplified block diagram of the REF50xx.

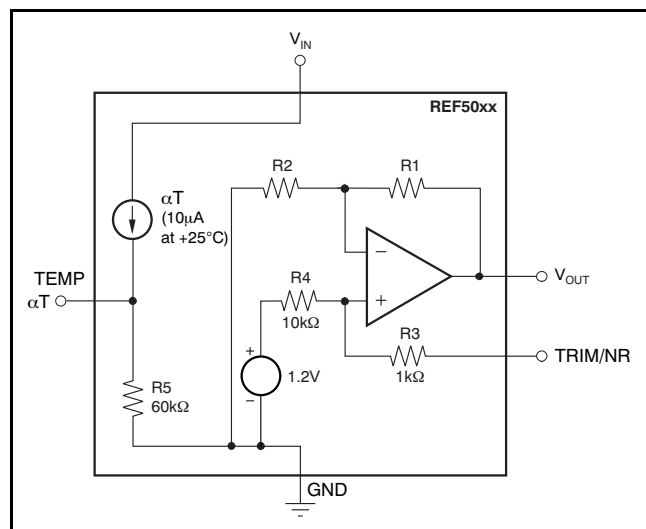

Figure 28. REF50xx Simplified Block Diagram

## BASIC CONNECTIONS

Figure 29 shows the typical connections for the REF50xx. A supply bypass capacitor ranging between 1μF to 10μF is recommended. A 1μF to 50μF output capacitor ( $C_L$ ) must be connected from  $V_{OUT}$  to GND. The ESR value of  $C_L$  must be less than or equal to 1.5Ω to ensure output stability. To minimize noise, the recommended ESR of  $C_L$  is between 1Ω and 1.5Ω.

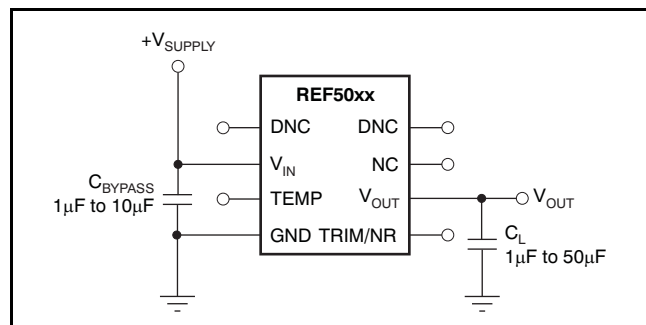

Figure 29. Basic Connections

## SUPPLY VOLTAGE

The REF50xx family of voltage references features extremely low dropout voltage. With the exception of the REF5020, which has a minimum supply

requirement of 2.7V, these references can be operated with a supply of 200mV above the output voltage in an unloaded condition. For loaded conditions, a typical dropout voltage versus load plot is shown in Figure 6 of the Typical Characteristics.

## OUTPUT ADJUSTMENT USING THE TRIM/NR PIN

The REF50xx provides a very accurate, factory-trimmed voltage output. However,  $V_{OUT}$  can be adjusted using the trim and noise reduction pin (TRIM/NR, pin 5). Figure 30 shows a typical circuit that allows an output adjustment of ±15mV

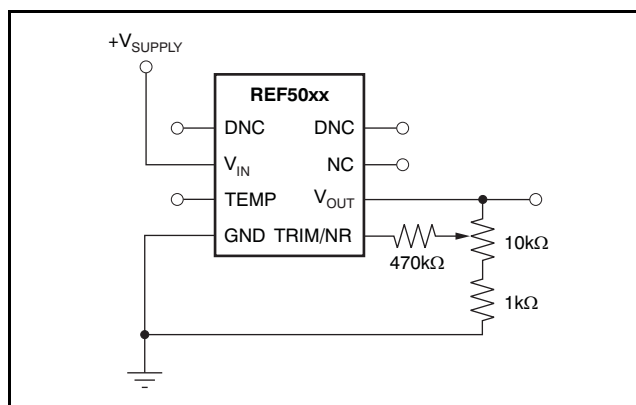

Figure 30.  $V_{OUT}$  Adjustment Using the TRIM/NR Pin

The REF50xx allows access to the bandgap through the TRIM/NR pin. Placing a capacitor from the TRIM/NR pin to GND (see Figure 31) in combination with the internal  $R_3$  and  $R_4$  resistors creates a low-pass filter. A capacitance of 1μF creates a low-pass filter with the corner frequency between 10Hz and 20Hz. Such a filter decreases the overall noise measured on the  $V_{OUT}$  pin by half. Higher capacitance results in a lower filter cutoff frequency, further reducing output noise. Note that use of this capacitor increases startup time.

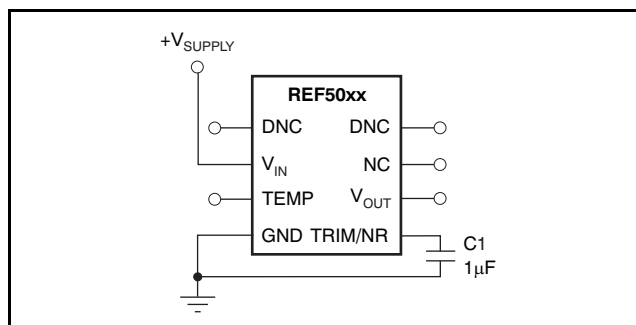

Figure 31. Noise Reduction Using the TRIM/NR Pin

## TEMPERATURE DRIFT

The REF50xx is designed for minimal drift error, which is defined as the change in output voltage over temperature. The drift is calculated using the box method, as described by the following equation:

$$\text{Drift} = \left( \frac{V_{\text{OUTMAX}} - V_{\text{OUTMIN}}}{V_{\text{OUT}} \times \text{Temp Range}} \right) \times 10^6 (\text{ppm}) \quad (1)$$

The REF50xx features a maximum drift coefficient of 3ppm/°C for the high-grade version, and 8ppm/°C for the standard-grade.

## THERMAL HYSTERESIS

Thermal hysteresis for the REF50xx is defined as the change in output voltage after operating the device at +25°C, cycling the device through the specified temperature range, and returning to +25°C. It can be expressed as Equation 2:

$$V_{\text{HYST}} = \left( \frac{|V_{\text{PRE}} - V_{\text{POST}}|}{V_{\text{NOM}}} \right) \cdot 10^6 (\text{ppm}) \quad (2)$$

Where:

$V_{\text{HYST}}$  = thermal hysteresis (in units of ppm).

$V_{\text{NOM}}$  = the specified output voltage.

$V_{\text{PRE}}$  = output voltage measured at +25°C pretemperature cycling.

$V_{\text{POST}}$  = output voltage measured after the device has been cycled from +25°C through the specified temperature range of –40°C to +125°C and returned to +25°C.

## TEMPERATURE MONITORING

The temperature output terminal (TEMP, pin 3) provides a temperature-dependent voltage output with approximately 60kΩ source impedance. As seen in Figure 8, the output voltage follows the nominal relationship:

$$V_{\text{TEMP PIN}} = 509\text{mV} + 2.64 \times T(^{\circ}\text{C})$$

This pin indicates general chip temperature, accurate to approximately ±15°C. Although it is not generally suitable for accurate temperature measurements, it can be used to indicate temperature changes or for temperature compensation of analog circuitry. A temperature change of 30°C corresponds to an approximate 79mV change in voltage at the TEMP pin.

The TEMP pin has high output impedance (see Figure 28). Loading this pin with a low-impedance circuit induces a measurement error; however, it does not have any effect on  $V_{\text{OUT}}$  accuracy.

To avoid errors caused by low-impedance loading, buffer the TEMP pin output with a suitable low-temperature drift op amp, such as the OPA333, OPA335, or OPA376, as shown in Figure 32.

Figure 32. Buffering the TEMP Pin Output

## POWER DISSIPATION

The REF50xx family is specified to deliver current loads of ±10mA over the specified input voltage range. The temperature of the device increases according to the equation:

$$T_J = T_A + P_D \times \theta_{JA} \quad (3)$$

Where:

$T_J$  = Junction temperature (°C)

$T_A$  = Ambient temperature (°C)

$P_D$  = Power dissipated (W)

$\theta_{JA}$  = Junction-to-ambient thermal resistance (°C/W)

The REF50xx junction temperature must not exceed the absolute maximum rating of +150°C.

## NOISE PERFORMANCE

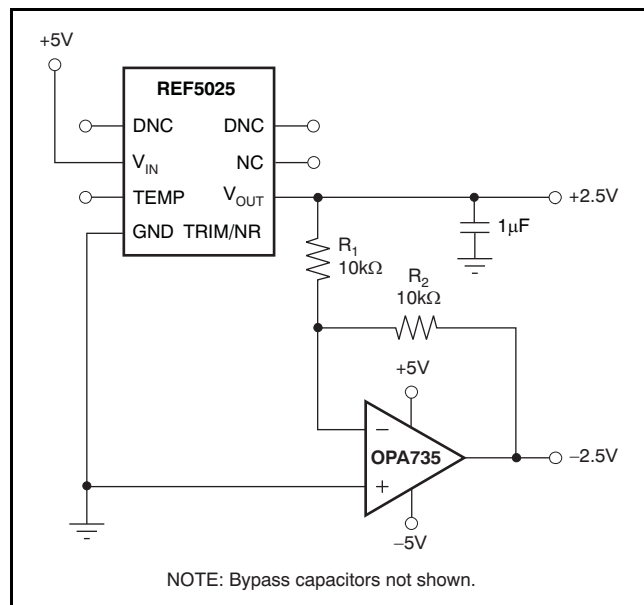

Typical 0.1Hz to 10Hz voltage noise for each member of the REF50xx family is specified in the [Electrical Characteristics: Per Device](#) table. The noise voltage increases with output voltage and operating temperature. Additional filtering can be used to improve output noise levels, although care should be taken to ensure the output impedance does not degrade performance.

For additional information about how to minimize noise and maximize performance in mixed-signal applications such as data converters, refer to the series of *Analog Applications Journal* articles entitled, *How a Voltage Reference Affects ADC Performance*. This three-part series is available for download from the TI website under three literature numbers: [SLYT331](#), [SLYT339](#), and [SLYT355](#) for [Part I](#), [Part II](#), and [Part III](#), respectively.

## APPLICATION CIRCUITS

### NEGATIVE REFERENCE VOLTAGE

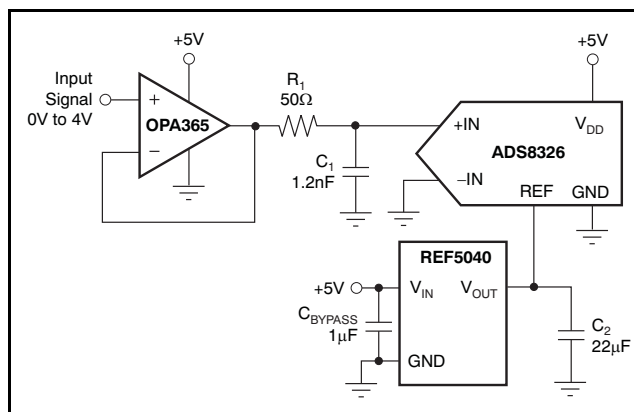

For applications requiring a negative and positive reference voltage, the REF50xx and OPA735 can be used to provide a dual-supply reference from a 5V supply. Figure 33 shows the REF5025 used to provide a 2.5V supply reference voltage. The low drift performance of the REF50xx complements the low offset voltage and zero drift of the OPA735 to provide an accurate solution for split-supply applications. Care must be taken to match the temperature coefficients of  $R_1$  and  $R_2$ .

**Figure 33. The REF5025 and OPA735 Create Positive and Negative Reference Voltages**

### DATA ACQUISITION

Data acquisition systems often require stable voltage references to maintain accuracy. The REF50xx family features low noise, very low drift, and high initial accuracy for high-performance data converters. Figure 34 shows the REF5040 in a basic data acquisition system.

**Figure 34. Basic Data Acquisition System**

## REVISION HISTORY

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision E (June 2010) to Revision F	Page
• Changed <i>Excellent Long-Term Stability</i> feature bullet .....	1
• Changed <i>Thermal Hysteresis</i> typical values .....	4
• Changed <i>Long-Term Stability</i> typical values .....	4
• Added note 3 to Electrical Characteristics .....	4
• Changed <a href="#">Figure 22</a> .....	8
• Changed <a href="#">Figure 23</a> .....	8
• Changed <a href="#">Figure 24</a> .....	8
• Changed <a href="#">Figure 25</a> .....	8
• Changed <a href="#">Figure 26</a> .....	8
• Changed <a href="#">Figure 27</a> .....	9

Changes from Revision D (April 2009) to Revision E	Page
• Updated <i>Features</i> list; added <i>Excellent Long-Term Stability</i> bullet .....	1
• Added <i>Thermal Hysteresis</i> parameters and specifications .....	4
• Added <i>Long-Term Stability</i> parameters and specifications .....	4
• Added <a href="#">Figure 22</a> through <a href="#">Figure 24</a> .....	8
• Added <a href="#">Figure 25</a> through <a href="#">Figure 27</a> .....	8
• Added <i>Thermal Hysteresis</i> section .....	11
• Revised <i>Noise Performance</i> section; added paragraph with links to applications articles .....	11

Changes from Revision C (December 2008) to Revision D	Page
• Removed all notes regarding MSOP-8 package status. MSOP-8 package released at time of document revision .....	1
• Changed <i>Storage Temperature Range</i> absolute minimum value from –55°C to –65°C .....	2
• Added test condition to <i>Line Regulation, All other devices</i> specification .....	4
• Added <i>Load Regulation</i> test condition and <i>Over Temperature</i> specifications .....	4
• Added typical characteristic graph, <i>Quiescent Current vs Input Voltage</i> ( <a href="#">Figure 10</a> ) .....	6

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

---

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF REF5020, REF5025, REF5040, REF5050 :**

- Enhanced Product: [REF5020-EP](#), [REF5025-EP](#), [REF5040-EP](#), [REF5050-EP](#)

NOTE: Qualified Version Definitions:

- Enhanced Product - Supports Defense, Aerospace and Medical Applications

DGK (S-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 per end.
  - D. Body width does not include interlead flash. Interlead flash shall not exceed 0.50 per side.
  - E. Falls within JEDEC MO-187 variation AA, except interlead flash.

## D GK (S-PDSO-G8)

# PLASTIC SMALL OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - $\triangle C$  Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
  - $\triangle D$  Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
  - E. Reference JEDEC MS-012 variation AA.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
